1 I am here to find you and I will...

$$f = (e^x + \sin((x + 4)))$$

2 I did it... But at what cost

$$\frac{d}{dx} = (e^x \cdot 1 + \cos((x + 4)) \cdot (1 + 0))$$

3 The final trivial transition

$$\frac{d}{dx} = (e^x + \cos((x + 4)))$$
