**1 I am here to find you and I will...**

$$f = (120 + \cos(-1 \cdot x))$$

**2 I did it... But at what cost**

$$\frac{d}{dx} = (0 + -1 \cdot \sin(-1 \cdot x) \cdot (0 \cdot x + 1 \cdot -1))$$

**3 The final trivial transition**

$$\frac{d}{dx} = -1 \cdot \sin(-1 \cdot x) \cdot -1$$
